CAN 5G BE MADE SAFE?

	<p>Is it possible for 5G tech to be used safely? Can the frequencies be adjusted to be less harmful? Is 5G tech made in the USA safer than 5G tech made by Huawei in China. Is the definition of what "5G" means the same in every region? These are valid questions that deserve to be answered by the authorities implementing 5G. We need transparency. We need our health concerns to be acknowledged and addressed, not a race to manufacture and install the most powerful cellular technology possible, without regard for health and the environment.
